We are not the developer or owner of this component and this page is just a reference for the component.Q: Expose a URL to a custom domain name I have a custom domain name (example.com) and I would like to point it to a folder on my server. I don't want to use a third party redirect service. Is this possible using.htaccess and/or a PHP script? A: This is certainly possible, but you need to have a script that will catch the request, read the hostname from the request, and do the appropriate redirect. Here's an example in PHP, assuming you have a folder called /testfolder: // Set the target URL in the HEADER header('Location: /testfolder'); // Or in a tag or HTML comment: Note that if you do that, you will probably have to make sure that the public_html folder is

writable by Apache or whatever other program is serving the page, or else your script will break. If you can only have an absolute path, for instance /home/foo/testfolder, then you will have to code this using mod_rewrite. The mod_rewrite rule you need is: RewriteRule ^

What's New In?

Spire.DataExport is 100% pure.NET component suite for data export into MS Word, MS Excel, HTML, XML, PDF, MS Access, DBF, SQL Script, SYLK, DIF, CSV, MS Clipboard formats. Quickly and easily export data from SQL command or listview or datatable.net component. Save your much time and money by using Spire.DataExport. Spire.DataExport supports all popular databases (MySQL, MySQL, Oracle, MS SQL Server, MS Access, PostgreSQL, SQLite, etc) and all popular file formats (MS Word, MS Excel, HTML, XML,

PDF, DBF, SQL Script, SYLK, DIF, CSV, MS Clipboard formats). You can export data from all SQL Databases through ADO.NET (SqlCommand or OleDbCommand) or from all.NET lists (ListView, DataGridView, Array, DataTable, etc) or directly from DataSets, DataTables, DataViews and/or DataBinding controls. Data export is very simple with a drag&drop interface. Choose your data fields, specify the destination and click 'Export' button to save the file. Spire.DataExport provides simple yet powerful functionality, so you don't have to spend time on scripting. Spire.DataExport is designed to be used in a quick and easy way, so there is no need to look for complex options, get frustrated and waste your time. Features: * Support all popular databases (MySQL, MySQL, Oracle, MS SQL Server, MS Access, PostgreSQL, SQLite, etc) and all popular file formats (MS Word, MS Excel, HTML, XML, PDF, DBF, SQL Script,

SYLK, DIF, CSV, MS Clipboard formats). * Work with all popular.NET components (DataGridView, ListView, DataTable, DataView, Binding, etc). * Support all popular data fields, such as Int, Date, String, etc. * Supports all popular.NET data types, such as Int, Decimal, Double, etc. * Designed with a simple, powerful interface. You can get maximum functionality with minimum effort. * Export data to a file with just a click, no need to spend time on scripting. * Multiple field selection (add, delete or update) * Support for "Copy to Clipboard" and other functions, such as ActiveX button, etc. Requirements: * Windows Operating System. * Windows XP or later. Package: Spire.DataExport, the component suite, has multiple components to work with. Spire.DataExport includes 10 components: Spire.DataExport.ToolBar: Main toolbar.

System Requirements For Spire.DataExport:

Windows 10 macOS 10.12.4 Linux 4.4.0 or higher Surface Pro 3 Surface Laptop 1 15.6-inch or 13.3-inch 2-in-1 device The Intel(R) Core(TM) i5-7200U or its equivalent processor 4 GB of system memory (RAM) Windows 10 Mobile 16 GB of internal storage Android 5.1 or higher Minimum 512 MB of RAM To play Bravely
